PRESS RELEASE

Muehldorf a. Inn, July 1, 2026

ODU-MAC® RAPID: NEW METAL HOUSING VARIANT ODU OFFERS AN ALTERNATIVE TO THE CURRENT PLASTIC HOUSING

The new ODU-MAC® RAPID metal housing is an additional variant of the ODU-MAC® RAPID. Using metal instead of plastic allows for a thinner wall thickness. This makes the housing ideal for systems with limited space, particularly in the medical, industrial, and test and measurement sectors. Both ODU-MAC® Blue-Line frames and ODU-MAC® White-Line frames in size 4 can be installed. The connector is available as standard in black or orange housing options, allowing it to blend in well with your device. The space-saving spindle locking and the half shell design ensure easy assembly, component replacement, and proper cable routing. To ensure even greater stability and durability, optional perforated metal sheets are used for strain relief.

Its key features include not only its robust and space-saving design, but also its high contact density, the flexibly

adjustable cable outlet, and the flush mounting of the receptacle. For the proven ease of use, the built-in ODU-MAC® Blue-Line modules have high mountability and can be installed and removed without tools. In addition, the connector is available complete with cable assembly, in line with the “one-stop shop” principle, whereby the interface, termination technology, and cable are all provided directly by ODU.

Thanks to ODU’s decades of expertise in connector solutions and its global locations, ODU is able to guide you through the

ODU-MAC® RAPID: The proven half-shell design is now also available in metal

consulting, design, manufacturing, and inspection processes. With 80% in-house integration, we guarantee the fastest possible and crisis-proof delivery.
