# ODU MINI-SNAP® F

## FEATURES

- Quick and easy mating and locking
- Quick and easy demating
- Blind mating and demating in difficult-to-reach places
- Low space requirements on the receptacles
- Definite and secure locking conditions
- Low power requirement
- Suitable for use with robots
- Easy cleaning of the connector plug housing possible

## APPLICATIONS

- Medical
- Industrial
- Test and measurement
- Military and security
- Energy
- eMobility

All shown connectors are according to IEC 61984:2008 (VDE 0627:2009); connectors without breaking capacity (COC).

ODU MINI-SNAP is UL-listed under file E110586, fulfils the demands of RoHS (2011/65/EU) and has a licence in accordance to VDE (Reg.-No. 40004941). MIL-specification: Tests carried out (see page 84).

All dimensions are in mm.

Some figures are for illustrative purposes only. Subject to change without notice. Errors and omissions excepted. We reserve the right to change our products and their technical specifications at any time in the interest of technical improvement. This publication supersedes all prior publications.

This publication is also available as a PDF file that can be downloaded from [www.odu-connectors.com](http://www.odu-connectors.com)

Issue: 2018-05

### Data transmission protocols

These ODU specific connectors can transmit common data transmission protocols such as CAT 5 or Ethernet, but they are not CAT- or Ethernet-standard connectors.

## ODU group overview

- Almost 80 years of experience in connector technology
- 2,300 employees worldwide
- Sales subsidiaries in China, Denmark, France, Germany, Hong Kong, Italy, Japan, Korea, Romania, Sweden, UK and the US as well as 5 production and logistics sites
- All technologies under one roof: Design and development, machine tooling and special machine construction, injection, stamping, turning, surface technology, assembly and cable assembly

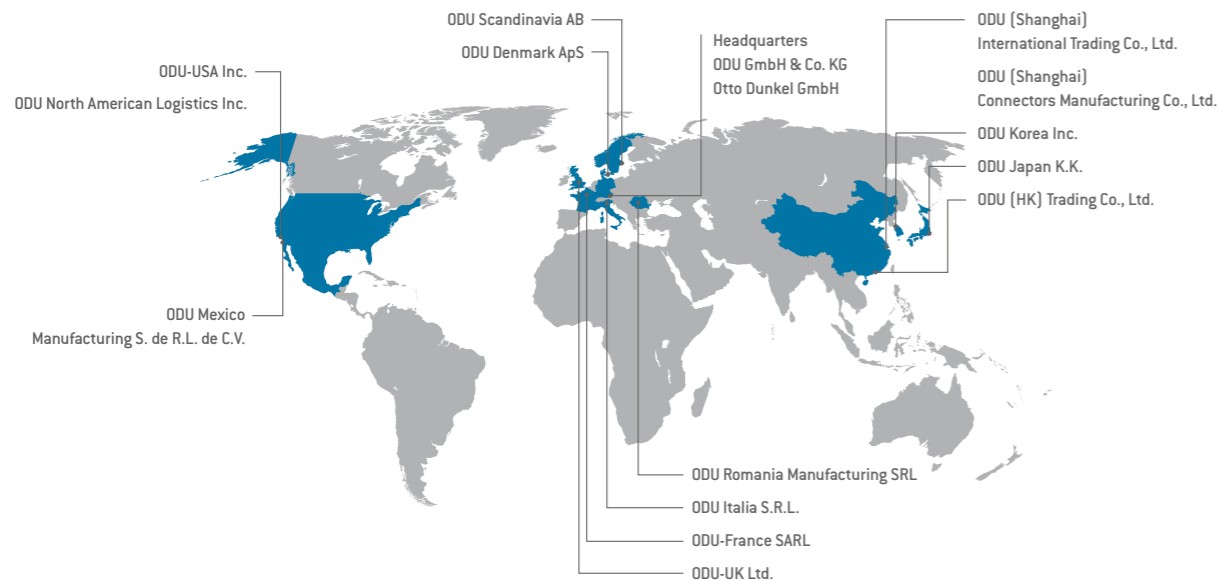

As of February 2021

## Certificates & approvals

- ISO 9001
- IATF 16949
- ISO 13485
- ISO 14001
- ISO 50001
- Wide range of UL, CSA, VG and VDE approvals
- UL Wiring Harnesses certified

For a complete list of our certifications and approvals, please visit our website.

## Worldwide customer proximity

## ODU serves the markets

# PRODUCT PORTFOLIO

## Circular Connectors

- Circular connector series in robust metal or plastic housing
- Different locking systems available: Push-Pull and Screw-Lock options or Break-Away for quick release
- Contacts for soldering, crimping and PCB termination
- 2 up to 55 contacts and protection classes IP50 to IP69
- Autoclavable for medical applications
- Hybrid inserts for combined transmission

## Modular Connectors

- Application-specific hybrid interface
- Manual mating and automatic docking
- Flexible modular design and highest packing density
- High variety of locking options
- Mating cycles scalable as required from 10,000 to over 100,000 (1 million)
- Transmission of signals, power, high current, high voltage, HF signals (coax), media, high-speed data or fiber optics

## Cable Assembly

- One point of contact for the complete solution
- State-of-the-art manufacturing facilities for small, medium and high volumes at production sites worldwide
- Overmolding in silicone, hot-melt and high-pressure procedures
- Customer-specific labeling and cable printing
- Wide range of standard cables and accessories available
- Rapid prototyping and fast customer samples

## Electrical Contacts

- Versatile contact technologies with high reliability and durability
- Current-carrying capacity of up to 2,400 A
- Rugged and universal contact systems
- Stamping technology for customer-specific high volume solutions
- Very high vibration and low, stable contact resistance

## Mass Interconnect Solutions

- For testing printed circuit boards (PCBs) and electronically assembled units
- Innovative engagement option: electromechanical version with remote control available
- 8 tensioning points stop the frame distortion
- Maximum flexibility with ODU-MAC® modules and signal blocks
- Adapter frame (ITA) with tolerance compensation
- Easy maintenance access for a simple and fast modification

## FURTHER PRODUCTS OF THE ODU PUSH-PULL CONNECTOR SERIES:

- Versatile keying possibilities – in terms of colour and mechanical
- Low weight
- 2 to 26 contacts
- IP 50, IP 64 and IP 67
- Shielded version (BG 2) available
- Simplest assembly
- Autoclaveable / sterilisable model

- Keying over half-shell
- 2 to 27 contacts
- Low weight
- IP 50 and IP 67
- 3 sizes
- Plastic connector plug housing

- Keying over pin and groove
- 2 to 40 contacts
- 6 sizes
- IP 50 and IP 68
- Contacts for solder, crimp and PCB termination

- Keying over insulator
- 2 to 10 contacts / mixed inserts
- 3 sizes
- IP 50 and IP 68 with same outer diameter possible
- Contacts for solder, crimp and PCB termination

- Push-Pull and Break-Away version
- 3 to 55 contacts
- 6 sizes
- Watertight – IP 68
- Easy-Clean and High-Density version
- Tested acc. MIL
- Low weight (aluminium connector plug housing)

<sup>1</sup> International protection class in mated condition. <sup>2</sup> International protection class in unmated condition to the end device.

# CIRCULAR CONNECTORS WITH PUSH-PULL LOCKING IN METAL CONNECTOR PLUG HOUSING

ODU MINI-SNAP is the ideal self-locking circular connector for a wide range of applications. Whether used for transmitting power, signals, data or other media, this circular connector in its robust metal connector plug housing impresses customers with its exceptional quality, high reliability and ideal handling characteristics.

The Push-Pull principle reliably ensures that the connector will not come loose during application in practice: Once plugged in, the ODU MINI-SNAP locks itself into the receptacle automatically. It cannot be separated by pulling on the cable. Instead, the connector can easily be separated from the receptacle by pulling on the outer housing.

The ODU MINI-SNAP is available in a wide range of sizes and models. In addition, you can choose between three base codings.

### VERSATILE CONFIGURATION OPTIONS

There are 5 sizes, 3 termination types and a great variety of various contact inserts to choose from.

# THE LOCKING PRINCIPLE FOR ODU SERIES F

Push-Pull locking systems have a highly user-friendly locking mechanism. When the connector is mated with the receptacle, the connector's locking fingers (1) will lock into place in the receptacle and form a dependable connection between both parts. It cannot be separated by pulling on the connector's cable (2). Instead, the connector can easily be separated from the receptacle by pulling on the outer housing (3). Push-pull connectors from ODU are available in 5 different standard sizes with diameters from 9.4 mm to 18 mm.

Connector in unmated condition.

Pulling on the cable or back nut causes the locking fingers to grip harder into the locking groove in the receptacle. This prevents the connector from being disconnected.

But pulling on the outer housing will cause the fingers to emerge from the locking groove, making it easy to disconnect the connector.

# IMPORTANT ISSUES AT A GLANCE

## VARIOUS SIZES

- Metal connector plug housing deliverable in 5 sizes
- Outer diameter 9.4 mm to 18 mm
- Number of contacts 2 to 27 contacts, mixed inserts
- Protection class IP 50 and IP 68 are deliverable

## APPLICATIONS AND MATERIALS

The ODU MINI-SNAP uses PEEK insulator material as a standard feature. Other materials are available upon request. ODU MINI-SNAP connector plug housings are made of brass, nickel plated and then matt chrome plated. Nickel and black chrome plated connector plug housings are available upon request as special materials. The internal parts are made of nickel plated brass.

Thanks to its versatility and autoclavability, the ODU MINI-SNAP is used in a wide range of fields, such as medical, measurement and testing, military and security, industrial electronics and energy.

The temperature of ODU MINI-SNAP range under general conditions of use runs from -40 °C to +120 °C, while autoclavable connectors can even be used at temperatures up to +134 °C (see page 84).

# TURNED CONTACTS

Turned contacts are available in diameter 0.5 mm to 3.0 mm in the following termination types:

**Solder, crimp and PCB**

Mating cycles	> 5.000
Material	Brass
Plating	Ni and Au

## TERMINATION TECHNOLOGIES

	Plug	Receptacle
Crimp termination <sup>1</sup>	•	•
Solder termination	•	•
PCB termination	•	•

<sup>1</sup> Crimp-clip-contacts available with diameter 0.7 mm, 0.9 mm and 1.3 mm.

## STANDARD PIN CONTACTS

Information on diameters, terminal types and current-carrying capacity can be found after the inserts.

## CONFIGURATION

Correct configuring – step by step

ODU MINI-SNAP®

# BIT BY BIT TO THE PERFECT CONNECTION

ODU offers you high-quality connectors and comprehensive service for the complete assembly. From connectors to watertight potting, we provide the complete system from a single source.

## SAMPLE CONFIGURATION STEP BY STEP

The perfect product for you in just a few steps. These step-by-step instructions show you how to configure your own individual product with the ODU part number key based on a sample configuration.

Connector in style 2 / size 2 / series F / keying 1 / connector plug housing Ms matt chrome plated / insulator PEEK / 16 contacts / pin (solder) Au / termination cross-section AWG 22 / cable diameter 6,5 – 7 mm / back nut for silicone cable bend relief (silicone cable bend relief has to be ordered separately)

# YOUR WAY TO AN INDIVIDUAL CONNECTION:

## HOW TO CONFIGURE WITH THE PART NUMBER KEY

This shows you how ODU's part number key is composed. In the first part of the configuration, select the connector plug housing (such as style and size) of the connector. In the middle part of the part number key, you configure the contact insert and then the cable entry.

### Type

- A = Break-Away connector / panel mounted plug
- G = Receptacle
- K = In-line receptacle
- S = Plug
- W = Right-angled plug

¹Other insulation materials on request. ²Black chrome plated on request.

# SUMMARY ODU MINI-SNAP® SERIES F

The ODU MINI-SNAP series F with keying using a half-shell. These Push-Pull circular connectors can be configured in many different ways: a wide variety of sizes and termination types and contact inserts are available.

- Keying over half-shell
- 2 to 27 contacts / mixed inserts
- Up to 5 sizes and 3 termination types
- Choice of a multiplicity of connectors and receptacles
- Protection class IP 50 and protection class IP 68 available
- 5,000 mating cycles and more
- Contacts for solder, crimp and PCB termination

# COLOUR CODING RINGS

### EXAMPLE OF ASSEMBLY

Material: Plastic PA66

### SIZES

Thread	Part number	Ø A mm	Ø B mm
M 9	700.422.____.922.009	13.5	9.1
M 10	700.422.____.922.010	16.5	10.1
M 12	701.422.____.922.012	17	12.1
M 14	701.422.____.922.014	20	14.1
M 14	715.422.____.922.014	21	14.1
M 15	702.422.____.922.015	22	15.1
M 16	702.422.____.922.016	23	16.1
M 18	703.422.____.922.018	25	18.1
M 20	703.422.____.922.020	28	20.1

### COLOURS

Colour code	Colour	RAL no. <sup>1</sup> [similar]
202	Red	3020
203	White	9010
204	Yellow	1016
205	Green	6029
206	Blue	5002
207	Grey	7005
208	Black	9005

## HOW TO PLACE THE RIGHT ORDER:

This shows you how the part number of the colour coding rings is composed. In the first step, select the size and note the part number. Put the colour code and part number together depending on your choice of colour (see example).

STEP 1:	Choose size	700.422.____.922.009
STEP 2:	Choose colour	...202...
STEP 3:	Completed part number	700.422.202.922.009

<sup>1</sup> Because of different raw materials the colours may slightly differ from RAL numbers.

## TECHNICAL INFORMATION

ODU connectors ensure perfect and reliable transmission of power, signal, data and other media in a wide variety of applications.

Further information can be found on the following pages.

ODU MINI-SNAP®

# INTERNATIONAL PROTECTION CLASSES

Acc. IEC 60529:2013 (VDE 0470-1:2014).

Code letters (International Protection)		First code number (Degrees of protection against access to hazardous parts respectively against solid foreign objects)		Second code number (Degrees of protection against water)	
IP		6		5	
Code number	Protection against access to hazardous parts / Protection against ingress of solid foreign objects	Code number	Protection against harmful effects due to the ingress of water	Code number	Protection against harmful effects due to the ingress of water
0	No protection	0	No protection against contact / No protection against solid foreign objects	0	No protection against water
1	Protection against large foreign objects	1	Protection against contact with the back of the hand / Protection against solid foreign objects $\varnothing \geq 50$ mm	1	Protection against dripping water
2	Protection against medium-sized foreign objects	2	Protection against contact with the fingers / Protection against solid foreign objects $\varnothing \geq 12.5$ mm	2	Protection against dripping water (tilted)
3	Protection against small foreign objects	3	Protection against contact with tools / Protection against solid foreign objects $\varnothing \geq 2.5$ mm	3	Protection against spray water
4	Protection against granular foreign objects	4	Protection against contact with a wire / Protection against solid foreign objects $\varnothing \geq 1.0$ mm	4	Protection against splashing water
5	Dustproof	5	Protection against contact with a wire / Protection against uncontrolled ingress of dust	5	Protection against water jet
6	Dustproof	6	Protection against contact with a wire / Complete protection against ingress of dust	6	Protection against powerful water jet
				7	Protection against the effects of temporary immersion in water
				8	Protection against the effects of continuous immersion in water
				9	Schutz gegen Hochdruck und hohe Strahlwassertemperaturen

# PRINCIPLE OF WATERTIGHTNESS WITH ODU MINI-SNAP®

All IP 68 submersible ODU MINI-SNAP connectors have a rated water depth of 2 m (0.2 bar) for 24 hours in accordance with IEC 60529:2013 (VDE 0470-1:2014). A watertight connector requires a sealing in a cable collet system. The sealing must fit over the cable precisely. The cable jacket must be smooth, cylindrical and free of grooves. The connector should be encapsulated to make it watertight when not mated.

### PROTECTION AGAINST WATER BY THE FOLLOWING SEALINGS<sup>1</sup>

Case	Termination	Mated		Unmated	
		Tight	Position	Tight	Position
1	Cable interior	Yes	① ②	No	
2	Receptacle interior	Yes	① ② ③	No	
3	Receptacle interior	Yes	① ② ③	Yes	③ ④

① O-ring    ② Gasket<sup>2</sup>    ③ O-ring    ④ Potting

<sup>1</sup> The following applies to the contacts: the contacts are protected in cases 1, 2 and 3 when mated. When not mated, the contacts are only protected by a protective cover (see page 61 and 62) which must be removed before mating.

<sup>2</sup> The cable seal with elastic disks requires coordination with the cable. Decisive factors: Diameter tolerance, roundness, cable structure, cable jacket hardness.

## HOUSING MATERIALS / SURFACES

Component	Material designation	Surface
Connector plug housing Back nut Round nut	Cu alloy	Cr
Cable collet EMI ring Half-shells Lock washer Nut Retainer ring	Cu alloy	Ni
Contact	Cu alloy	Au

ODU MINI-SNAP connector plug housings are made of brass, nickel plated and then matt chrome plated. Nickel and black chrome plated connector plug housings are available upon request as special materials. The internal parts are made of nickel plated brass.

## INSULATOR MATERIALS (ROHS 2011/65/EU COMPLIANT)

	Norm	Unit	PEEK
Dielectric strength	IEC 60243-1:2013	KV/mm	19
Operation temperature	ASTM D-149 :2009	°C	-50/+250
Flammability rating	UL 94: 2013	-	V-0
Comparative tracking index CTI	IEC 60112:2009 (VDE 0303-11:2010)		175

## TERMINATION TECHNOLOGIES

Insulators with pin contacts fit into the receptacle (or in-line receptacle) as well as into the plug. The same applies to insulators with socket contacts. In general, insulators with socket contacts are installed in the live part (to provide protection from accidental touch). The means of mounting the contacts in the insulator is important on account of the termination technologies. Termination technologies for ODU MINI-SNAP connectors include: soldering, crimping and PCB.

### SOLDER TERMINATION

### CRIMP-CLIP-CONTACT FOR PEEK INSULATOR

### PRINT TERMINATION

### TERMINATION TECHNOLOGIES FOR TURNED CONTACTS

#### Solder termination

The contacts are mounted in the insulator before the single conductors are assembled. An insulator with pre-installed contacts is referred to as a contact insert.

#### Crimp termination

Here, the individual contact is connected to the individual wires via deformation in the termination area. Then the contacts are individually installed in the insulator. Accordingly, insulators and individual contacts – and not complete contact inserts – are supplied for the crimp termination. The contact processing for the production of connecting cables via crimping creates a secure, durable and corrosion-free contact. Cold compaction (crimping) compresses the conductor and contact material to the press points so as to form a gas-tight connection with tensile strength to fit the conductor material. 8-point deformation is generally used for turned crimp contacts.

#### PCB termination

This is only used in the receptacle or the panel mounted plug in if the receptacle or the panel mounted plug is to be mounted directly on a printed circuit board (PCB). Further information is available upon request.

# CONVERSIONS / AWG (AMERICAN WIRE GAUGE)

The American Wire Gauge (AWG) is based on the principle that the cross-section of the wire changes by 26% from one gauge number to the next. The AWG numbers decrease as the wire diameter increases, while the AWG numbers increase as the wire diameter decreases. This only applies to solid wire.

However, stranded wire is predominately used in practice. This has the advantage of a longer service life under bending and vibration as well as greater flexibility in comparison with solid wire.

Stranded wires are made of multiple, smaller-gauge wires (higher AWG number). The stranded wire then receives the AWG numbers of a solid wire with the next closest cross-section to that of the stranded wire. In this case, the cross-section of the stranded wire refers to the sum of the copper cross-sections of the individual wires.

Accordingly, strands with the same AWG number but different numbers of wires differ in cross-section. For instance, an AWG 20 strand of 7 AWG 28 wires has a cross-section of 0.563 mm<sup>2</sup>, while an AWG 20 strand of 19 AWG 32 wires has a cross-section of 0.616 mm<sup>2</sup>.

Source: ASTM

# CURRENT LOAD OF TURNED CONTACTS

Nominal single contact current load for pin / slotted socket (nominal diameter 0.5 mm – 3.0 mm)

### UPPER LIMIT TEMPERATURE OF STANDARD CONTACTS: +120 °C.

The wire cross-section shown in the legend was connected as test cable. In the case of multi-position connectors and cables, the heating is greater than it is with individual contacts. For that reason, it is calculated with a derating factor.

For connectors, the derating factors for multi-core cables pursuant to VDE 0298-4:2013 are applied. The derating factor is factored in at 5 live wires and up.

### DERATING CURVE

The corrected current-carrying capacity curve, derived from the base curve determined (0.8 x measured current). It factors in manufacturing tolerances as well as uncertainties in temperature measurement and measurement arrangement. See derating measurement method.

### RATED CURRENT (NOMINAL CURRENT)

The metrologically determined current which is permitted to flow continuously through all contacts at the same time and will increase the contact temperature by 45 Kelvin.

The amperage is determined according to the derating measurement method (DIN EN 60512-5-2:2002) and derived from the derating curve.

### DERATING FACTOR

Number of loaded wires	Derating factor
5	0.75
7	0.65
10	0.55
14	0.5
19	0.45
24	0.4

# OPERATING VOLTAGE

Acc. SAE AS 13441:2004 method 3001.1

The values specified in the catalogue correspond to SAE AS 13441:2004 method 3001.1. The table values were determined according to EIA 364-20E: 2015. The inserts were tested while mated, and the test current was applied to the pin insert.

75 % of the dielectric withstanding voltage is used for the further calculation. The operating voltage is 1/3 of this value.

All tests were conducted at normal indoor climate and apply up to an altitude of 2,000 m.  
 If there are any deviations, the derating factors are to be factored in according to the applicable standards.  
 Test voltage = Dielectric withstanding voltage × 0.75  
 Operating voltage = Dielectric withstanding voltage × 0.75 × 0.33

**ATTENTION:**

With certain applications, the safety requirements for electrical devices are very strict in terms of operating voltage. In such cases, the operating voltage is defined according to the clearance and creepage distances between parts which could be touched.

When selecting such a connector, please contact us and let us know the safety standard which the product must meet.

---

Test voltage = Dielectric withstanding voltage × 0.75  
 Operating voltage = Dielectric withstanding voltage × 0.75 × 0.33

---

# ELECTRO MAGNETIC COMPATIBILITY (EMC)

Electromagnetic compatibility (EMC) concerns more than just devices and electronic circuits. In the age of networks and data communication, connecting elements such as cables and connectors are also very important. Interference signals penetrating the connector from outside corrupt data signals and can cause significant system malfunctions. This can be reliably avoided with high-grade shielding for the cables and connectors. In order to give our customers certainty when using ODU MINI-SNAP connectors, we've had a size 3 connector measured by an accredited EMC laboratory to determine its EMC quality. Since the sizes 0, 1 and 2 are identical to this connector in structure, just proportionally reduced in size, the values for shielding attenuation are the same.

The measurement was conducted according to the injection or parallel wire method pursuant to VG 95214-11:2002. The connector pair is connected with to the receiver of a network analyzer on one end, while the other end receives an adjusted termination resistor. The injection wire is attached as closely as possible along the connector pair. A flat cable is usually used here, since an optimum adjustment can be achieved by attaching more or fewer wires. High-frequency signals in the 10 kHz to 3 GHz range are now fed in through the injection wire. The network analyzer measures the energy irradiated through the connector plug housing and into the connector, providing a shielding attenuation factor as the logarithmic performance ratio AT in dB. The important thing with this method is that all supply lines (especially the ones to the connector pair) must be very well shielded so that no interference signals can penetrate the measurement system and corrupt the measured values. This provides the shielding attenuation in dB as a curve over the logarithmically applied frequency.

Users frequently demand a shielding attenuation better than -55 dB (based on a requirement of Deutsche Post). It is clear that our connector meets this requirement over the entire measurement range.

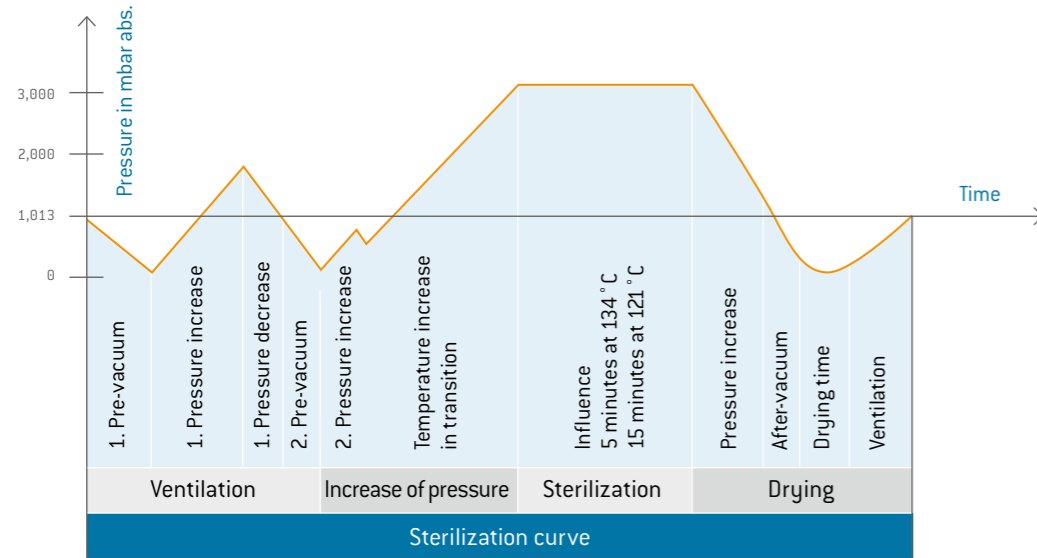

# AUTOCLAVING OF ODU MINI-SNAP®

We can also provide ODU MINI-SNAP connectors for the following sterilization procedures upon request: steam sterilization via pre-vacuum or gravity method. The connectors are tested in autoclaves for 500 cycles at 134° C in accordance with DIN EN 13060:2015.

Please consult our technical team for the further sterilization procedure.

## TEST STANDARD

In terms of the quality approval, sizes 0 and 3 were subjected to environmental and mechanical tests pursuant to MIL and passed them flawlessly.

Definition	Standard
High temperature	MIL-STD-810G w/Change 1:2014 method 501
Low temperature	MIL-STD-810G w/Change 1:2014 method 502
Temperature shock	MIL-STD-810G w/Change 1:2014 method 503
Humidity	MIL-STD-810G w/Change 1:2014 method 507
Salt fog	MIL-STD-810G w/Change 1:2014 method 509
Shock	MIL-STD-810G w/Change 1:2014 method 516
Vibration	MIL-STD-1344A method 2005.1 (IV)
Watertightness IP 68	IEC 60529:2013 (VDE 0470-1:2014)

# TECHNICAL TERMS

### AMBIENT TEMPERATURE

Temperature of the air or other medium in which a piece of equipment is intended to be used in. (IEC 44/709/CDV:2014 (VDE 0113-1:2014))

### AUTOCLAVABILITY

See page 84.

### AWG

American Wire Gauge (see page 80).

### BASE CURVE

A current-carrying capacity curve metrologically determined according to the method described in IEC 60512-5-2:2002 (DIN EN 60512-5-2:2003) depending on the permissible limit temperature of the materials. See page 81.

### CHEMICAL RESISTANCE

Many secondary processing procedures use adhesives, cleaning agents or other chemicals on our products. Contact with unsuitable chemicals may have an adverse effect on the mechanical and electrical properties of the insulation and housing materials which specified properties may not be able to withstand. Please observe our processing suggestions and technical instructions in this catalogue.

### CLEARANCE DISTANCE

The shortest distance in the air between two conductive parts.

### CONNECTORS

Also known as connectors without contact rating (COC): (IEC 61984:2008 (VDE 0627:2009)). An element which enables electrical conductors to be connected and is intended to create and/or separate connections with a suitable counterpart. Also known as connectors without contact rating (COC): (IEC 61984:2008 (VDE 0627:2009)). An element which enables electrical conductors to be connected and is intended to create and/or separate connections with a suitable counterpart.

### CONNECTOR WITHOUT BREAKING CAPACITY (COC)

Connector which is not deemed to be engaged or disengaged in normal use when live oder under load.

### CONTACT RESISTANCE

Total resistance value measured from terminal to terminal. In this case, the resistance is significantly lower than the contact resistance. The specifications are average values.

### CORES

Electrical conductor, solid wire or multi-wire strand, with insulation as well as any conductive layers. Cables or leads may have one or more cores.

### CREEPAGE DISTANCES

The shortest distance between two conductive parts along the surface of a solid insulation material. This factors in all elevations and recesses in the insulator, as long as defined minimum dimensions are on hand.

### CRIMP BARREL

A terminal sleeve which can accommodate one or more conductor and be crimped by a crimping tool.

### CRIMP CONNECTION (CRIMP TERMINATION)

The permanent, non-detachable and solder-free mounting of a contact to a conductor via deforming or shaping under pressure to make a good electrical and mechanical connection. Executed with crimping tool, press or automatic crimping machine (see page 70).

### CRIMPING AREA

The specified area of the crimp barrel in which the crimp termination is executed by means of deforming or shaping the barrel under pressure around the conductor.

### DEGREE OF POLLUTION

The effect of pollution is factored in as degree of pollution when measuring clearance and creepage distances. Four degrees of pollution are defined for the micro-environment: IEC 60664-1:2007 (VDE 0110-1:2008).

### DELIVERY FORM

Connectors can be delivered in assembled form or as individual parts.

### DERATING CURVE

See page 81.

## TECHNICAL TERMS

### DERATING FACTOR

According to VDE 0298-4:2013, with connectors and cables over 5 contacts, the heating is greater than it is with individual contacts. For that reason, the aforementioned standard is calculated with a derating factor.

### DERATING MEASUREMENT METHOD IEC 60512-5-2:2002 (DIN EN 60512-5-2:2003)

Measurement method to determine the current-carrying capacity of connectors in consideration of the maximum permissible limit temperature (see page 81).

### FIXED CONNECTORS

Intended for mounting on a fixed surface such as a frame, dock, device or wall (with ODU also receptacle or panel mounted plug).

### FREE CONNECTORS

Intended for mounting on free ends of mobile leads and cables (with ODU also connectors, plugs, in-line receptacles).

### INSULATOR

Part of a connector which separates conductive parts with different potentials from one another; usually identical to the contact carrier.

### KEYING (ORIENTATION)

Arrangement with which differing polarization of otherwise identical connectors prevents interchangeability. This is a good idea if two or more identical connectors are attached to the same device (see also compatible connectors, see page 40).

### LOWERMOST LIMIT TEMPERATURE

The lowest permissible temperature at which a connector may be operated. At ODU MINI-SNAP, it amounts to  $-40^{\circ}\text{C}$ .

### MATERIALS (STANDARD MODEL)

See page 78.

### MATING AND DEMATING FORCE

The force required to fully mate or demate pluggable elements without the influence of a coupling or locking device.

### MATING CYCLES

Mechanical actuation of connectors via push and pull action. A mating cycle consists of one mating and demating action. ODU's standard value for the ODU MINI-SNAP series is 5,000 mating cycles.

### MAX. CONTINUOUS CURRENT

The metrologically determined amperage at room temperature (approx.  $20^{\circ}\text{C}$ ) which increases the contact temperature to the limit temperature. The values specified in the catalog apply to either individual contacts or completely assembled inserts / modules, as indicated.

### NOMINAL SINGLE CONTACT CURRENT LOAD

The current-carrying capacity which each individual contact can be loaded with on its own (see page 81).

### NOMINAL VOLTAGE

The voltage which the manufacturer specifies for a connector and which the operating and performance features relate to.

### OPERATING TEMPERATURE FOR ODU MINI-SNAP

Range between the uppermost and lowermost temperature limits.  $-40^{\circ}\text{C}$  to  $+120^{\circ}\text{C}$  (see page 13).

### PCB (A.K.A. "PRINTED CIRCUIT BOARD")

A PCB is a carrier for electronic components. It serves the purposes of mechanical mounting and electrical connection.

### PCB TERMINATION

Production of a conductive connection between the PCB and an element in through-hole assembly, THT (through-hole technology).

### RATED CURRENT (NOMINAL CURRENT)

See page 81.

### RATED VOLTAGE

According to DIN EN 60664-1 standard "Value of a voltage which is specified by the manufacturer for a component, device or operating medium and relates to the operating and performance features."

## TECHNICAL TERMS

### SOLDER CONNECTION (SOLDER TERMINATION)

Termination technology in which a molten additional metal (solder) with a lower melting point than the base materials to be connected is used to attach two metallic materials to one another.

### TIGHTNESS IEC 60529:2013 (VDE 0470-1:2014)

See protection classes on page 77.

### TERMINATION CROSS-SECTION

The specified cross-sections correspond to a "fine-wire" conductor structure pursuant to DIN EN 60228:2005 (VDE 0295:2005; class 5) or a "fine-wire" conductor structure (7/19 wire) according to AWG (ASTM B258:2014).

### TERMINATION TECHNOLOGIES

Methods for connecting the leads to the electro-mechanical element, such as solder-free connections pursuant to IEC 60352 (DIN EN 60352): crimp, screw connection etc. or soldering connection (see page 79).

### TEST VOLTAGE

The voltage which a conductor can withstand under defined conditions without dielectric breakdown or flashover.

### UPPERMOST LIMIT TEMPERATURE

The maximum permissible temperature at which a connector may be operated. It includes contact heating through current-carrying capacity.

With ODU MINI-SNAP Standard TURNTAC contacts, it amounts to  $+120^{\circ}\text{C}$ . Please consult ODU for high-temperature applications.

### WIRE

Wires (solid conductors) are available with an insulator sleeve and/or electrical shielding. Cables or conductors may be made up of one or more wires.

### GENERAL NOTE

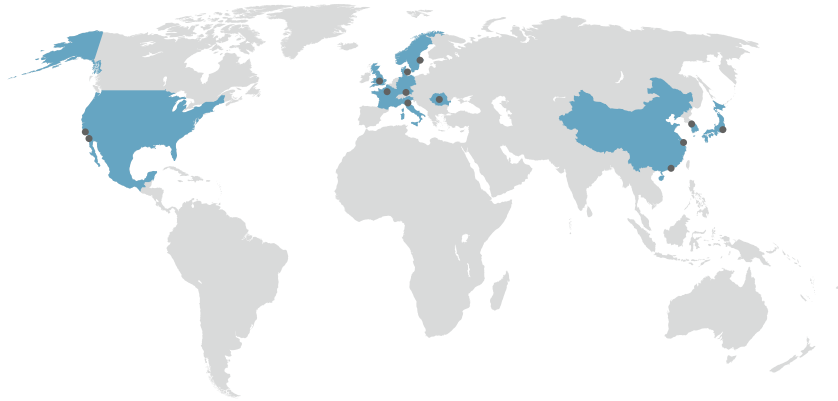

The connectors listed in this catalogue are intended for use in high voltage and frequency ranges. Suitable precautionary measures must be taken to ensure that people do not come into contact with live conductors during installation and operation.

All entries in this catalogue were thoroughly reviewed before printing. ODU reserves the right to make changes based on the current state of knowledge without prior notice without being obliged to provide replacement deliveries or refinements of older designs.

A PERFECT ALLIANCE.
